Portfolio Co-manager
– Healthcare

Market Overview

The Russell Midcap Growth Index[1] (up 6.8 percent) continued to post strong gains during the fourth quarter, outperforming the Russell Midcap Value Index (up 5.5 percent). All sectors within the Russell Midcap Growth generated positive returns, led by strong results within industrials (up 9.5 percent), financials (up 9.2 percent) and consumer staples (up 9.2 percent). Healthcare (up 3.4 percent) was a relative laggard even though it posed positive absolute returns.

For the full year, the Russell Midcap Growth Index (up 25.3 percent) substantially outperformed the Russell Midcap Value (up 13.3 percent) over the course of 2017. Within growth, information technology (up 37.9 percent), financials (up 33.0 percent) and healthcare (up 31.3 percent) led returns while energy (down 5.6 percent) represented the only negatively performing sector.

Portfolio Review[2,3]

Eagle Mid Cap Growth portfolios were effectively in line (on a gross basis) with the benchmark Russell Midcap Growth Index in the fourth quarter. Outperformance came from the energy and real estate sectors; however, our holdings within the consumer discretionary and industrials sectors lagged, subsequently offsetting some of the portfolios' positive relative returns.

For the full year, the Eagle Mid Cap Growth portfolios outpaced (on a gross basis) the benchmark Russell Midcap Growth Index. The portfolios posted outperformance in several sectors, including consumer discretionary, information technology, healthcare and consumer staples. We saw some underperformance in the portfolios' financials and materials sectors, which slightly tempered returns over the course of the year.

Diamondback Energy is an energy exploration-and-production (E&P) operator in the Permian Basin of West Texas. Shares rose as a more favorable pricing environment for oil developed over the quarter. As such, we continue to believe Diamondback remains well-positioned to benefit from strong and improving economics derived from its acreage position in the attractive Permian Basin.

Discount retailer Burlington Stores reported strong results despite hurricane-related disruptions in certain markets. Indications are that discount retailers fared very well during the recent holiday season.

Align Technology sells clear "dental-aligner systems" (what used to be called braces). The firm reported yet another stellar quarter: Align continued to see solid growth in volumes due in part to tailwinds associated with improved products, increased penetration of existing accounts, direct-to-consumer advertising and geographic expansion.

Coherent continues to benefit from strong orders for its Smartbeam product used in the fabrication of organic light-emitting diode (OLED) displays increasingly used in smartphones. The product is sold out through 2018 with incremental capacity coming on in 2019. Further, we believe the potential for applications of Coherent's equipment (e.g., in tablets, autos and television) provide upside over the longer term.

Domestic homebuilder Lennar reported solid quarterly results due to strength in new-home demand.

Videogame-maker Electronics Arts recently launched a new game that received somewhat underwhelming reviews due in part to the presence of in-game purchase opportunities that detracted from the gameplay. The company

acknowledged the issue and subsequently removed those purchases; consequently, we believe the company will regain that lost ground.

Semiconductor firm Advanced Micro Devices waned as investors were slightly disappointed with early sales of its recently launched product lines. We continue to believe the firm remains poised to benefit from the positioning and versatility of its processors in several markets (e.g., gaming and virtual reality, artificial intelligence and datacenter applications) as ongoing innovations continue to drive demand for its chips.

Domino's Pizza encountered investor concerns of softening NFL football viewership and the subsequent potential pressure on results early on in the season, leading shares lower during the quarter.

Biotechnology firm Incyte focuses on cancer treatments. Recent clinical trial data reported by one of its peers reflected compelling results for the treatment of melanoma. That, in turn, placed competitive pressure on Incyte, which is expected to report its own phase-3 data in the first half of 2018.

Juniper Networks sells communications equipment primarily for internet-service providers. The company encountered some near-term softness in its cloud segment when some of the firm's customers opted to delay purchases. We sold our position.

Outlook

Macroeconomic data improved steadily through 2017 and now seems to be further accelerating. Gross domestic product (GDP) growth is projected to be about 3 percent for the back half of 2017 after years of sub-2 percent numbers. That's not all: Consumer confidence numbers and manufacturing data have been strong, unemployment numbers are at new lows and federal regulations continue to be rolled back. Global growth in Asia and Europe also has been good. Commodity prices have been rising and sector rotation has been good with even beleaguered retailers showing signs of "life after Amazon." The recent tax cut can – in our view – only further accelerate the economy. We believe GDP growth could potentially approach 4 percent by the back half of 2018. Some industries will have labor shortages and wages may finally push higher. We believe the administration's pro-business agenda has been instrumental in driving an improved economy but higher wages are critical to the success of the program. Interest rates have remained – and will continue to be low on an historical basis – through all this. The U.S. Federal Reserve appears poised to raise rates three to four times this year by increments of 0.25 percentage points. We believe the Fed has done a good job of modest tightening and broadcasting its intent. Valuations may appear expensive by historical measures – mid-cap stocks currently trade at 19 times earnings – but that ratio declines to about 16 times earnings after adjusting for tax revisions. It seems the moon, sun and stars are aligned for at least a positive start to the year for equities. However, our concern is that markets tend to go against the consensus, which clearly is bullish.

The outlook for the energy sector appears to us to be positive due to improved supply/demand fundamentals for oil. Global oil inventories gradually tightened through the second half of 2017 and appear poised to return to normalized levels in 2018. Oil production from North American shale has continued its upward climb but management teams across the industry are now acutely aware that investors are demanding satisfactory returns on invested capital. Investments in mid-cap companies generally involve greater risks than investing in larger capitalization companies. These companies often have narrower commercial markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a fund's portfolio. Additionally, small-cap companies may have less market liquidity than larger companies.

Growth companies are expected to increase their earnings at a certain rate. When these expectations are not met, investors may punish the stocks excessively, even if earnings showed an absolute increase. Growth company stocks also typically lack the dividend yield that can cushion stock prices in market downturns. The companies engaged in the technology industry are subject to fierce competition and their products and services may be subject to rapid obsolescence. The values of these companies tend to fluctuate sharply.

tantly, we believe the equity markets will no longer offer a financing mechanism to bridge the funding gap between operations and drilling budgets: the hallmark of the energy boom. With this fiscal constraint in place, we believe that higher oil prices are necessary in 2018 to fund drilling activities to meet strong global demand for oil. In an environment where investors are more closely scrutinizing drilling returns and disproportionately rewarding the companies that need minimal external funding to grow production, we continue to favor companies that control leasehold positions in the Permian Basin.

On the heels of a strong performance in 2017, the materials and industrials sectors appear to us to be poised for further gains in 2018. The prospects for continued earnings growth in both sectors are good due to strengthening economic activity bolstered by a recovery in the energy sector and sustained momentum in the supply-constrained housing market. Encouragingly, the Institute for Supply Management (ISM) Manufacturing Index rose 1.5 points in December to 59.7: its second-highest reading since February 2011 and near its best level since mid-2004. Additionally, new-home sales surged 17.5 percent, the biggest gain since January 1992, in November to a 733,000 unit annual rate: the highest level since July 2007. Given this backdrop, we will continue to favor building products and materials industries. Finally, it is important to note that the industrials and materials sectors are projected to benefit greatly by the lower corporate-tax rate, which represents a catalyst for significant earnings growth in 2018.

Leaving 2017 in the rearview and moving into 2018, the $3 trillion healthcare industry retained its position as the largest in the U.S. economy while continuing to grow in the 4 percent-5 percent range. Given its sheer size, one would expect the law of large numbers to begin to impact the industry's growth rate. However, the combined tailwinds of an aging population, longer lifespans and new medical innovations remain poised to support greater-than-GDP growth rates within the healthcare industry. However, as has largely been the case recently, it remains in a state of organized chaos. A great deal of uncertainty remains regarding the status of Obamacare as only a minor adjustment to the legislation has been achieved after two previous failed attempts for overhaul, leaving major players such as health systems, providers, manufacturers and distributors to wonder what

– if any – further industry reform is possible. The adoption of high-deductible health plans, coupled with health savings accounts (HSAs), have forced employees to shoulder a much larger burden of their insurance premiums and other out-of-pocket healthcare expenses, ultimately encouraging patients to curtail their medical utilization.

In light of the sustained uncertainty in the healthcare space, we maintain our favorable disposition toward healthcare companies providing "cash-pay" products and services (e.g., aesthetics, pet care, contact lenses and dental products and services). The products and services that these types of companies provide are targeted directly at the consumer. Those firms generally have little regulatory or reimbursement impact from the federal government but, rather, are largely influenced by consumer confidence and other broad economic factors. Telemedicine has arrived and is gaining traction with managed care and healthcare systems as they realize its benefits, namely access to quality care at a much lower cost. The U.S. healthcare system's transformation from volume- to value-based will – in our view – favor organizations with scale, which likely will be driven by strategic mergers and acquisitions (M&A). Finally, advancements in biotechnology are increasingly yielding therapies that are curing patients of otherwise chronic, expensive or fatal conditions. The ongoing innovation of these firms should continue to draw interest from investors as they develop cost-effective treatments that show meaningful results and serve large markets.

The outlook for the financials sector remains constructive – in our view – as we head into 2018 with healthy levels of economic growth coupled with a rising-interest-rate environment. The possibility of multiple rate increases in 2018 should drive quality earnings growth at those banks with asset-sensitive balance sheets. Loan growth across the financials sector should see improvement as we move through 2018 and gain more certainty on both healthcare and tax policy. Credit quality across consumers and businesses is expected to remain benign but we would not expect to see broad improvements in credit quality from these levels. In addition to the macroeconomic-level drivers within financials, we continue to pursue opportunities in companies that are utilizing technology to improve the performance and value-added proposition of their products. We are also pursuing opportunities in companies at the forefront of changes in the consumer-payment landscape. We believe those types of opportunities should help drive meaningful market-share gains.

We believe continued stability and, in some cases, improvements in global macroeconomic trends should help technology spending remain healthy into 2018. Improving consumer confidence, small-business optimism and lower corporate-tax rates offer optimism for growth in technology spending. Despite the market's healthy performance in 2017, we expect M&A activity to continue into 2018 given fairly palatable interest rates and a seemingly sympathetic political environment in Washington, D.C. We continue to focus on what we view as high-quality companies with strong management teams that are well-positioned to gain market share. Additionally, we are striving to identify names that we believe will benefit from long-term secular growth trends with themes that include security software, cloud computing, artificial intelligence, mobility, e-commerce, digital advertising, factory/industrial automation, security software, e-gaming and alternative energy. We remain positive on semiconductor fundamentals despite the outperformance of the group and are seeing a global increase in demand for factory-/industrial-automation equipment.

We expect consumer stocks to have a strong start to the year given the positive macroeconomic backdrop. Consumer confidence remains at historically high levels and we believe it may improve further reflecting the recent tax-rate reduction. Secular challenges remain but even the beleaguered retail sector showed strong gains in the fourth quarter. The recent cold-weather snap could be a boost for certain retailers and tax-law changes figure to disproportionally help retailers, which typically have high rates. Important housing and auto statistics remain very strong. Consumers continue to favor experiential activities; consequently, we favor beneficiaries such as cruise lines, fitness and gaming. Other attractive areas are stocks tied to autonomous driving. Finally, we believe housing and building-related stocks are also well-positioned in the current environment.
